

TouchFree Interactor™

INTERACTIVE MOTION CONTROLLER

TouchFree Interactor™

Bring a compelling hands-free interactive experience to product kiosks and live presentations.

Internal infrared trackers translate hand gestures, 200 times-per-second, to the interactive 3D presentation system. Integrated LEDs create a colorful light show along the acrylic sensor bar that reacts and responds to the users every gesture, for a Minority Report-like experience.

The reactive lighting syncs with on-screen graphics to create an integrated experience. Users can reach right into the presentation with an on-screen virtual reality hand that puppets their live hand gestures.

The TouchFree Interactor is a USB-powered device that is 24" wide, 4" tall and 4" deep.

TouchFree Interactor is an exhibitory.com exclusive. It includes easy-to-use software for creating a customized interactive experience using your own video files. Learn more at:

exhibitory.com/touch

Use TouchFree for:

- product demonstration
- trade show booth directory
- self-service kiosk
- digital signage
- lobby or retail installation
- interactive presentation
- live presentations
