

# X-rayVue™

PRODUCT VISUALIZER

## X-ray Vue™

Demonstrate products inside and out. X-ray Vue Product Visualizer is a magical screen that shows an interactive x-ray view of your product. Customers can see inside, touch and even operate your product. The sci-fi screen, suspended in front of your product, invites customers to understand your offerings and explore your product in ways never before possible.

X-ray Vue kiosks are customized to your specific product and offered in a variety of sizes and shapes — from small tabletop displays to free standing kiosks to massive room-size installations.

A touchscreen, suspended on hidden rails, floats in front of a product model revealing an “x-ray view” of the internal parts. Customers slide the screen side to side to examine and interact with the internal components. This tactile experience helps customers better understand products and retain that information.

X-ray Vue is an exhibitory.com exclusive. It includes all hardware, software and interactive content customized to your marketing needs. Learn more at:

X-rayVue was named Best New Exhibitory Product of 2016. Judges noted that it is particularly applicable to exhibitors displaying machinery or complex products. “This allows companies to showcase the kind internal product engineering that is otherwise difficult to display and discuss.”

# We are exhibitry.com

Your product has a story to tell. We make multimedia experiences that tell those stories. From concept to completion, the artists, directors, animators and trade show technologists of exhibitry.com create communicative media that informs and motivates customers. We specialize in:
